

TTMath AI WORKSHOP

Build Real AI Projects.
Learn Skills That Matter.

📍 IN-PERSON CLASSROOM COURSE · 8 WEEKS

More than theory. Real tools, real experience, real projects.

This workshop focuses on project-based learning. We'll cover key concepts, but more importantly, you'll gain hands-on **tools, workflows and real-world experience** that textbooks rarely teach.

WHAT YOU WILL LEARN

AI Tools in Real Use

Learn Claude, ChatGPT and more. Use AI to write code, find bugs, understand and refactor code, and brainstorm ideas. Learn how to evaluate and verify AI outputs.

Developer Essentials

Master the tools real developers use every day: command line, Git, GitHub, version control, and collaboration. Practical skills rarely covered in regular courses.

Software Project Management

Learn the professional development workflow: requirements → planning → development → testing → iteration → documentation. Track tasks, manage versions, and work like real developers.

Deployment & Basics of DevOps

Learn how to deploy your project online. Understand servers, domains, environment setup, and how to make your project publicly accessible.

Build, Test & Launch Your AI Project

Apply everything you learn to build a complete AI project from start to finish. Test, deploy, and share your work with a clean GitHub repository.

From idea
to live project.

**You build it.
You launch it.**

YOU WILL GAIN

- ✓ Practical AI tools you can use immediately
- ✓ Real-world developer skills and workflows
- ✓ Experience managing a complete software project
- ✓ Confidence to deploy and share your work online
- ✓ A finished AI project you can run, show, and be proud of
- ✓ A strong portfolio piece for high school, college applications and beyond

CLASS TIME

Saturday
4:45 PM – 6:15 PM

📍 In person · TTMath classroom

FEE

\$400

8 classes

PREREQUISITES

- Completed TTMath CS1 or equivalent, with strong programming skills
- Starting 8th grade and above in September
- Strong interest in AI

This is more than an AI course.

It's an in-person workshop that gives you the experience to turn ideas into real AI projects.
